Multidisciplinary management of prostate cancer
19-23 May 2019 | Pisa, Italy

This interactive, multi-disciplinary and state-of-the-art course on prostate cancer provides in-depth knowledge of the disease and its management, as well as an overview of the latest imaging and treatment techniques and drugs.

TARGET GROUP
The course is aimed at radiation oncologists, urologists, medical oncologists and other specialists and trainees who have a special interest in prostate cancer and are willing to update their knowledge.

COURSE AIM
This 5-day teaching course aims at focusing on the management of localised, locally advanced and metastatic prostate cancer. It emphasises the importance of a multidisciplinary approach and of teamwork, where full information exchange is vital to provide the best up-to-date scientific evidence on which the management of the disease will be based. This will be illustrated during state-of-the-art lectures presented by experts in the field, covering important issues such as biology, imaging, pathology, therapy and future developments. Interactive case studies and journal clubs will be integrated on a daily basis and there will be ample time for open discussions amongst participants and experts. A special session on target delineation for radiotherapists will also be organised during the course.

LEARNING OUTCOMES
• To provide an in-depth overview of the epidemiology, pathology, imaging and treatment options for low, intermediate and high risk prostate cancer
• To discuss patient selection/indications and contra-indications for the various treatment options
• To provide a critical overview of the surgical and radiotherapy techniques available for the management of prostate cancer
• To discuss the new drugs currently available for the management of the advanced and metastatic stages of the disease
• To debate on the most recent developments relevant to prostate cancer management.

COURSE CONTENT
• Normal prostate: anatomy – embryology, histology
• Prostate cancer: epidemiology and prevention, clinical diagnosis, imaging modalities pathology, staging
• Low risk prostate cancer: active surveillance, surgery and the postop pathology
• Radiotherapy and brachytherapy, the pathology after irradiation
• External beam radiotherapy: on-line control, target delineation
• High risk prostate cancer: radiotherapy and hormones, alternative radiotherapy regimens
• Toxicity of radiotherapy: acute and late morbidly – erectile dysfunction
• Role of surgery and its morbidity
• Alternative treatments
• Adjuvant and salvage radiotherapy after radical surgery
• Rising PSA after surgery and after radiotherapy
• Imaging for recurrent detection
• Node positive prostate cancer
• Metastatic prostate cancer: hormones and their complications
